

ModelMint

Governance Intelligence for Defensible and Scalable Model Risk Management

GOVERNANCE AND CAPABILITIES

Centralised model and credit risk intelligence unifying design, ownership, usage, and dependencies to enable proportionate model governance and oversight

Evidence-gated lifecycle orchestration from onboarding to retirement

Evidence-led alignment with RBI's June 2026 draft model risk guidance, scalable to final guidelines and global regulatory requirements.

Centralized model engineering platform providing standardized development frameworks, reusable components, and controlled model lifecycle management.

Connected registry, workflow, validation, monitoring and evidence services

Role-based governance with segregated decisions and traceable accountability

REGULATION-ADAPTIVE. ENTERPRISE-READY

Lifecycle-embedded controls for modern model risk management

Sovereign deployment inside the institution's own perimeter with SaaS-Grade release velocity

Supports governance frameworks, inventories, tiering, validation, monitoring, kill-switch, third-party and AI/ML oversight while generating lifecycle evidence.

Metadata-driven control plane where policy logic changes without touching product code

Governed AI held to the same explainability and audit standard as the models it oversees

Immutable evidence ledger enabling point-in-time reconstruction of every governance decision
